DTU Compute
Department of Applied Mathematics and Computer Science

Project Vision

For project idea, problem, feature (areas):

- see slides on project (P01-P03)

Here, we discuss the structure of the text and how to write about them! In four steps:

- Context

- Problem

- Solution (idea)

- Expected result

PV: Structure

- ## Context

  - → Necessary context for understanding this project and its needs

  - → Overall objective

  - → What exists already

- ## Problem (why?)

  - → What are the unmet needs

  - → What is missing

  - → Why do we need the new software
    Why is the existing software not enough?

- # Idea for solution

  - → What can we do about it

  - → Ideas for solving the problem

  - → More detailed issues that need to be addressed

  - → What will be the benefits

- # Expected result

  - → What will you be able to do with the (extended) software (which could not be done before)

  - → Features the software will have (on a high level of abstraction)
