

Radix and Suffix Sorting

- Radix Sort
- Suffix Sort

Philip Bille

Radix Sort

- **Sorting small universes.** Given a sequence of n integers from a universe $U = \{0, 1, \dots, u-1\}$.
- How fast can we sort sequence if the size of the universe is not too big?

Radix and Suffix Sorting

- Radix Sort
- Suffix Sort

Radix Sort

$n = 10, U = \{0, 1\}$

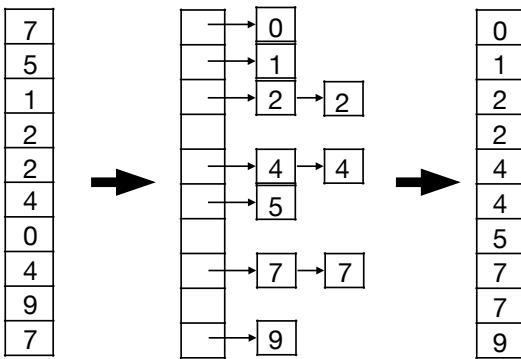

0	0
0	0
1	0
0	0
0	0
1	0
0	1
1	1
0	1
1	1

- **Algorithm.** Count 0s and 1s.
- **Time.** $O(n)$.

Radix Sort

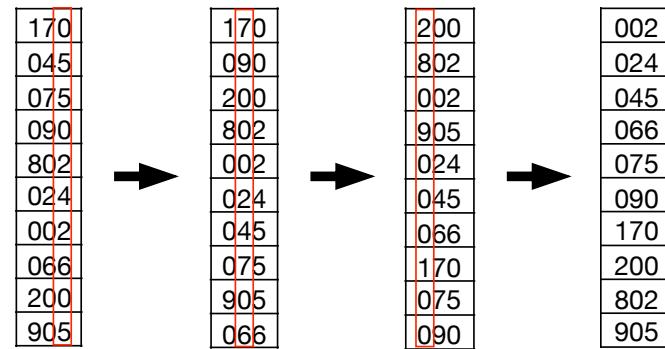

$n = 10, U = \{0, 1, \dots, n-1 = 9\}$

- **Algorithm.** Insert into array of linked list + traverse array of linked list.
- **Time.** $O(n + u) = O(n)$
- Sorting can be **stable**.

Radix Sort

$n = 10, U = \{0, \dots, n^3 - 1 = 999\}$

- **Radix Sort.** Sort on each digit from right to left using stable sort.
- **Time.** $O(n + n + n) = O(n)$

Radix Sort

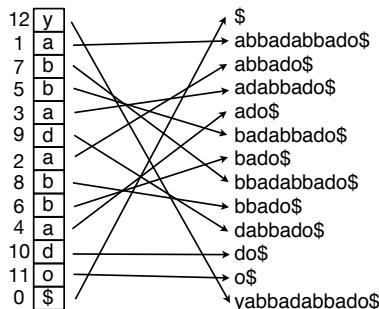

- **Radix Sort [Hollerith 1887].** Sort sequence of n integers from $U = \{0, \dots, n^{k-1}\}$.
 - Write each element in sequence as a base n integer $x = (x_1, x_2, \dots, x_k)$
 - Sort sequence according to each digit from right to left. Sorting should be **stable**.
- **Time.** $O(nk)$

Radix and Suffix Sorting

- Radix Sort
- Suffix Sort

Suffix Sort

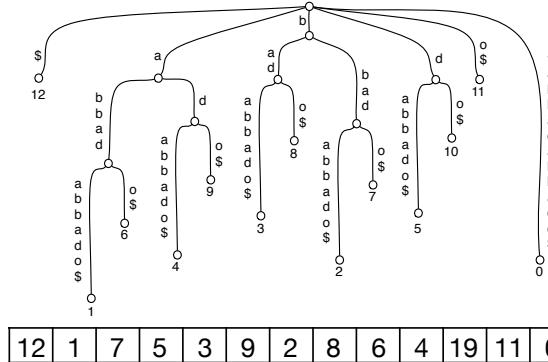

- **Suffix sorting.** Given string S of length n over alphabet Σ , compute the sorted lexicographic order of all suffixes of S .

- **Theorem [Kasai et al. 2001].** Given the sorted lexicographic order of suffixes of S , we can construct the suffix tree for S in linear time.

Suffix Sort

- **Suffix trees and sorting.** The lexicographic order of the suffixes is the same ordering as suffixes in the leaves of the suffix tree.
- **Suffix array.** The array of the sorted order of the suffixes.

Suffix Sort

- **Goal.** Compute the lexicographic order of all suffixes of S fast.
- For simplicity assume $|\Sigma| = O(n)$
- **Solution in 3 steps.**
 - Solution 1: Radix sorting
 - Solution 2: Prefix doubling
 - Solution 3: Difference cover sampling

Solution 1: Radix Sort

- **Radix Sort.**
 - Generate all suffixes (pad with \$).
 - Radix sort.

 abbadabba\$
 bbadabbado\$
 badabbado\$
 adabbado\$
 dabbado\$
 abbado\$
 bbado\$
 bado\$
 ado\$
 do\$
 o\$
 \$

- **Time.** $O(n^2)$

Solution 2: Prefix Doubling

- Prefix doubling [Manber and Myers 1990]. Sort substrings (padded with \$) of lengths 1, 2, 4, 8, ..., n. Each step uses radix sort on pair from previous step.

5	y	8	51	ya	10	84	yabb

4	o	7	40	o\$	9	70	o\$\$\$
0	\$	0	00	\$\$	0	00	\$\$\$\$

- Time. $O(n \log n)$

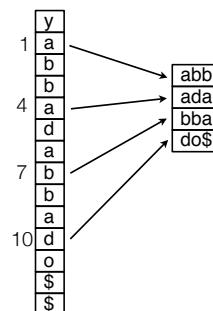

Solution 3: Difference Cover Sampling

- DC3 Algorithm [Karkkainen et al. 2003]. Sort suffixes in three steps:
 - Step 1. Sort sample suffixes.
 - Sample all suffixes starting at positions $i = 1 \bmod 3$ and $i = 2 \bmod 3$.
 - Recursively sort sample suffixes.
 - Step 2. Sort non-sample suffixes.
 - Sort the remaining suffixes (starting at positions $i = 0 \bmod 3$).
 - Step 3. Merge.
 - Merge sample and non-sample suffixes.

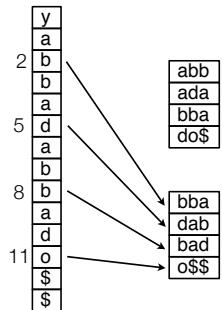

Step 1: Sort Sample Suffixes

Solution 3: Difference Cover Sampling

- **DC3 Algorithm.** Sort suffixes in three steps:

- **Step 1.** Sort sample suffixes.
 - Sample all suffixes starting at positions $i = 1 \bmod 3$ and $i = 2 \bmod 3$. $O(n)$
 - Recursively sort sample suffixes. $T(2n/3)$
 - **Step 2.** Sort non-sample suffixes.
 - Sort the remaining suffixes (starting at positions $i = 0 \bmod 3$). $O(n)$
 - **Step 3.** Merge.
 - Merge sample and non-sample suffixes. $O(n)$
- $T(n) = \text{time to suffix sort a string of length } n \text{ over alphabet of size } n$
- **Time.** $T(n) = T(2n/3) + O(n) = O(n)$

Solution 3: Difference Cover Sampling

- **Theorem.** We can suffix sort a string of length n over alphabet Σ of size n in time $O(n)$.
- **Theorem.** We can suffix sort a string of length n over alphabet Σ $O(\text{sort}(n, |\Sigma|))$ time.

Radix and Suffix Sorting
